Delivery

Compatible  
with most devices

**30w**

2 USB-A  
ports

- GaN semiconductors used
- PD and QC3.0 protocols supported
- Charges 4 devices simultaneously
- 2x USB-C ports 100W

- 2x USB-A ports 30W
- Automatic detection of the optimal current parameters for a charged device

Canyon's H-100 charger belongs to the new, GaN charging device type, constructed with the usage of semiconductors based on gallium nitride. This material allows to increase the power of the charger using the same gauge. It allowed the H-100 model to have such a compact size and be able to charge 4 devices simultaneously. Each of the 2 USB-C ports can supply power up to 100 watts, and each of 2 USB -A ports - up to 30 watts. Each port is labeled. The smart chip supports PD and QC charging protocols and distributes charging power in a way that prevents overheating of connected gadgets. A perfect tool for charging devices from a power socket.

Apple compatible
