- Quick charge cable included

We have a perfect power bank for our dearest Apple users. Straight to business: it has a dual Lightning and Type-C power input. With Type-C and USB-A output ports, you don't have to worry about another cable or adapter – you can charge your phone & recharge the power bank just with a Lightning cable. Simple as that. Hold on – this gets better: the Type-C output is capable of 20W Power Delivery. This power bank also supports QC 3.0, and it shouldn't be a surprise: we used Smart IC here. It can detect your device and cable capacity and optimize voltage. It also protects your gadget from short-circuiting, overheating, and other threats. This power bank is 10000mAh, more than enough to charge a phone about three times, but still compact and lightweight. Ideal for everyday carry!

Apple compatible
